

Vacuum IQ™

Maximize Energy Cost Savings While Extending The Life Of Your Equipment

Vacuum IQ™

Vacuum IQ™ can cut energy consumption up to 70%, often more. An electronic motor control and software program designed for motor-driven centrifugal vacuums; Vacuum IQ™ automatically adjusts motor speed to changing load requirements. In addition to dramatic energy savings, Vacuum IQ™ pays for itself by extending equipment life, reducing maintenance and downtime costs, and increasing the productivity of your vacuum area.

Vacuum IQ™ combines the technology of a variable frequency drive (VFD) with AutoVac's proprietary software

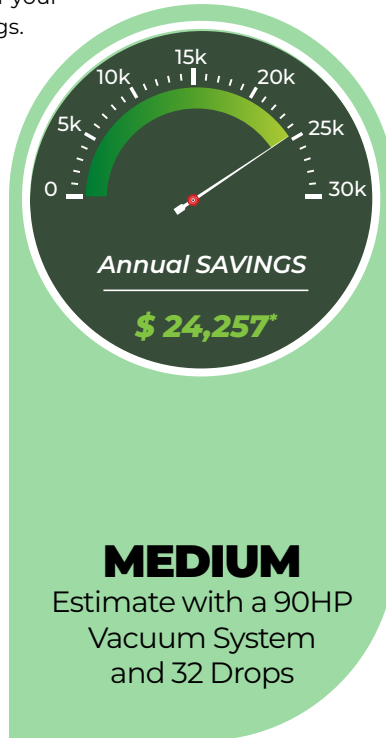

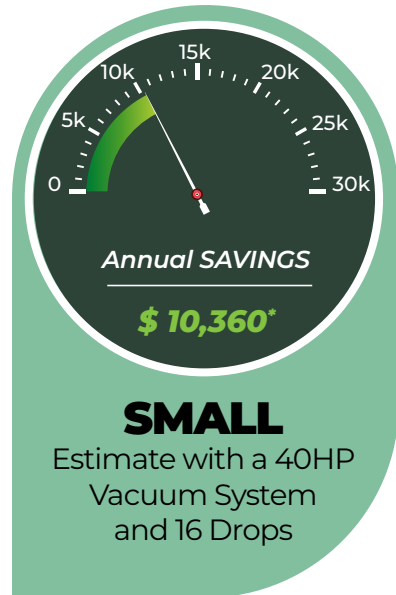

Features

- Dramatically cut energy costs by reducing energy consumption
- May earn a rebate from your energy provider for "Going Green" with Vacuum IQ™
- Reduce maintenance costs and equipment downtime
- Extend the life of your equipment
- Return of investment is months, not years
- Savings continue year after year
- Reduces vacuum producer dB

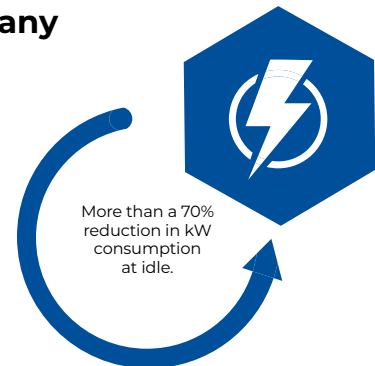

Check electricity rates with your local municipality to obtain exact savings calculations

Energy Savings Estimator

Obtain bigger savings no matter how small or large your vacuum configuration is. *Annual savings shown are estimated with national averages. Contact your Sonny's representative to conduct an assessment for your specific site to evaluate your potential savings.

Convenient mounting options to fit any backroom!

Vacuum IQ™ Was First Developed and Designed for Use in the Aerospace Industry with Boeing!
